CAREER OBJECTIVE

A Full-stack Engineer focused on building interactive, user-friendly web interfaces using React, Next.js, and modern UI frameworks. Always excited about problem-solving and continuous learning, with hands-on Experience exploring performance optimization, modern web technologies, and **software engineering principles**. A dedicated self-learner aiming to grow **System Design Expertise** while contributing to impactful, scalable, and high-quality projects.

SKILLS

Front-End:	React js, Next js, HTML5, CSS3, Javascript, Typescript, TanStack, ShadCN, GSAP, Framer Motion.
Back-End:	Node.js, Express js, Django, PostgreSQL, MySQL, MongoDB, REST APIs, RAG
Tools & Technologies:	Git, GitLab, Vercel, Azure, DigitalOcean, Postman, AI First IDEs, Skills, MCP
Soft Skills:	Communicative, Highly Adaptable, Time management, Teamwork, Problem Solving

WORK EXPERIENCE

A Maze Venture (Gulshan-1, Dhaka)

April 2026 - Present

Associate Software Engineer

- Developing interactive and responsive user interfaces using React and GSAP for smooth animations and enhanced user experience
- Building and maintaining backend services using Express.js and Django REST Framework
- Designing and managing databases with PostgreSQL and SQLite
- Collaborating with cross-functional teams to develop, test, and deploy features
- Writing clean, maintainable code and following best development practices
- Debugging issues and optimizing performance across the stack

PROJECTS

1. PettyCash – Multi-Tenant Operations & Requisition Platform

[Live Link](#) | [Client Code](#) | [Server Code](#)

- Developed a full-stack operations management system with **role-based workflows** and **dashboards** tailored for CEOs, General Managers, HR, Team Leads, and Employees.
- Integrated **JWT authentication** and a **shared-database, row-level isolation** multi-tenancy model to securely partition data across three distinct companies.
- Optimized system performance** by resolving N+1 issues to reduce list page database queries from 200+ to 1, and slashed network payloads from 45KB to 250 bytes.
- Technologies:** React, Tailwind CSS v4, GSAP, Django REST Framework, SQLite; containerised via Docker Compose and deployed on an Azure VM.

2. FitTrack– A Complete Fitness Management Platform

[Live Link](#) | [Client Code](#) | [Server Code](#)

- Built a full-stack fitness tracker platform (MERN stack) with role-based **dashboards** for Admin, Trainer, and Members.
- Integrated **Stripe payments**, **JWT authentication**, and **TanStack Query** for secure, efficient operations.
- Features Trainer applications, Class booking, Community forums, and Review system.
- **Technologies:** React, Tailwind, Firebase, Node.js, Express, MongoDB; deployed via Firebase.

3. Xai – Intelligence Workspace

[Live Link](#) | [Client Code](#)

- Built a single-page, scroll-driven prototype for an AI data-intelligence product (Next.js 14, TypeScript, Tailwind) demonstrating ingestion → reasoning → action in six sections.
- Implemented custom interactive surfaces: a 1,500-point WebGL particle field that morphs into a 12-node graph on activation, a GSAP-pinned scroll pipeline, a live dashboard with animated KPIs and sparklines, and a Three.js cursor-reactive icosahedron that explodes on keypress.
- Engineered a command palette (Cmd/Ctrl-K) with fuzzy search and keyboard shortcuts, full reduced-motion fallbacks, and seeded RNG for deterministic first paint.
- **Technologies:** Next.js, React, TypeScript, Tailwind, GSAP, Framer Motion, React Three Fiber, Three.js, GLSL; Vercel-ready.

EDUCATION

BSc in CSE

2023 — Present

Brac University

LANGUAGES

Bangla:	Native
English:	Professional Working Proficiency
